We manufacture & supply complete lighting fittings & retro-fit gear trays ideally suited to installations within prisons. Many can be adapted for use in Anti-Ligature environments where required.

Energy Saving LED Retro-Fit Gear Trays

We already have a significant range of replacement gear trays for many of the fittings typically installed within prisons.

Members of our team have been involved in the design, manufacture & supply of lighting to prisons over many years.

This is why we are confident that the choice of Aether replacement gear trays will ensure the simplest answer to making the important change to LED lighting.

In most instances simply remove the front cover, take out the existing gear tray and replace.

No wiring will usually be required.

The new LED gear trays will fit in exactly the same way as the old unit.

We will be very pleased to visit, take a walk around with your engineer, identify the different fittings and provide you with an inventory and quotation for your installation.

We look forward to hearing from you.
