

LED RETRO-FIT

Market leaders in commercial retro-fit trays

Aether Lighting is a UK based lighting manufacturer and market leader in the supply of LED retrofit solutions for lighting in the commercial sector through its RETRO-FIT brand.

SAVINGS EXAMPLE

1990's Multi Story Car Park,
416 fittings in total
on average lit for
14 hours a day.

Circular Fittings with 2 x
Compact Fluorescent
Lamps running at
120 Circuit watts.

Replaced with higher
output LED Circular
boards on Steel Tray
running at 42 Circuit watts.

ANNUAL COST SAVING OF

£48,084.69

based on £0.29 per KWH.

ANNUAL CO2 REDUCTION OF

90,200 kg

(and significant reduction on heat
produced reducing the
environmental impact).

COST SAVINGS

Once the need to update the lighting in a building has been identified, the process of the change to LED to reap the benefit of energy/cost savings and carbon footprint reduction is a daunting prospect. We can supply a fully proven and calculated strategy to suit your needs and programme. If you are replacing fluorescent or high output lamps or older LED lighting, our simple solutions will enable you to replace the internal parts of your existing lighting with steel trays and latest technology LED's and drivers from Tridonic or Philips.

RETRO-FIT

Most buildings were designed with good quality lighting at the initial build stage and retrofitting with high quality LED equipment means that you retain this investment and give it new life rather than sending perfectly good fittings to landfill and starting all over again.

SPECIALIST SUPPLIER

In our experience, there is one major factor that tips the balance in favour of choosing retro-fit and that is engaging with a specialist retro-fit supplier in Aether Lighting.

That's because at Aether, we guide you through the whole process starting with a free of charge site survey to identify the different makes and models of all of your lighting. It is very likely that we have already come across most of the fittings installed and have previously designed a retro-fit tray to suit them. However, if not, no problem, we'll design one just for you, a promise we'll keep whether there is only one fitting or a thousand of them.

Our team has over a century of combined experience in lighting, and this experience comes to the fore when producing lighting solutions for our clients across sectors such as, Commercial Offices and Buildings, Prisons and Secure Establishments, Hospitals, Transport Infrastructure & Local Authority Street Lighting.

INVESTMENT PAYBACK*

With the survey complete we present you with a quotation along with a cost reduction estimate comparing your existing lighting versus the proposed retrofit trays which will also calculate the payback period on your investment.

IT'S NOT ALL ABOUT ENERGY SAVING

Whilst cost savings are obviously the major driving force behind replacing the lighting in a building, it's not the only benefit. Modern LEDs and the myriad of advances they have gone through since their introduction means that in many cases you can improve and enhance the lighting of an area. Perhaps your current lighting is too bright, too dim or too glary. These improvements are presented by bespoke lighting schemes to illustrate expected lighting levels.

EASE OF INSTALLATION

Our LED retrofit trays are designed to be easy to fit into your existing lighting with, in most cases, no re-wiring required. They are designed to be quick and simple exchanges, resulting in additional cost savings from the ease of installation, and the resulting lower labour costs.

MANUFACTURED IN THE UK

All our steel powder coated retrofit trays are manufactured in our UK factory producing a low carbon footprint helping you to achieve your environmental goals across your building infrastructure.

**All RETRO-FIT by
AETHER LIGHTING trays
are supplied with a long
life 5 year warranty
using Tridonic or Philips
LED's and drivers to
achieve low
maintenance, high
quality lighting.**
