...and, of course, a range of lighting to suit any & all other areas of the railway environment.

Retro-fit, high quality, long lasting LED Gear Trays, Diffusers & Frames for existing installations.

Often the integrity of the housing remains perfectly serviceable but there is the need to upgrade the diffuser and frame or just the diffuser but almost certainly the inefficient fluorescent or discharge lamps will require replacement to gain the significant advantages of LED lighting.

Additionally some installations have been fitted with early, poor quality, LEDs that may also require replacement to achieve really worthwhile savings.

In these cases Aether will manufacture & supply replacement frames, diffusers and LED gear trays to ensure that your installation is maximising its energy saving potential in the most cost effective way.

In most instances simply remove the front cover, take out the existing gear tray & replace.

The new LED gear trays will fit in exactly the same way as the old units. A new “flying lead and terminal block” will be supplied, where required .

Once completed the entire fitting will continue to have ongoing CE compliance.

There are very likely many different lighting fittings installed within your infrastructure. Members of our team have been involved in the design, manufacture & supply of lighting to railways over many years so are very well placed to advise which Aether replacement will suit which fitting that you have.

Just give us a call and we will be happy to help you identify your needs, making a visit to site if requested.
